THE REPLY FILED 30 March 2011 FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE.							
1. The reply was filed after a final rejection, but prior to ro not the same day as filing a Notice of Appeal. To avoid abandonment of this application, applicant must timely file one of the following replies: (1) an amendment, affidavit, or other evidence, which places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 1.114. The reply must be filed within one of the following time periods:							
 a) The period for reply expires 3 months from the mailing date 							
b) The period for reply expires on: (1) the mailing date of this Advisory Action, or (2) the date set forth in the final rejection, whichever is later. In o event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of the final rejection. Examiner Note: If box 1 is checked, check either box (a) or (b). The amendment filed on 03/30/2011 will not be entered because the limitation "an inert gas substitution means for eliminating the hydrogen fluoride gas remaining in at least part of said line on a downstream from said first automatic valve on said hydrogen fluoride gas feed line while the the hydrogen fluoride gas inlet is disposed in the electrolyte in the electrolyte in the restriction of the properties of the properties of the properties of the properties of the hydrogen fluoride gas while the hydrogen fluoride gas while the hydrogen fluoride gas interest is disposed in the electrolyte in the electrolyte bath. In other words, the previous claims were also opened to the interpretation that the inert gas substitution means eliminates hydrogen fluoride gas even when the hydrogen fluoride gas inlet is not disposed in the electrolyte in th

Applicant's arguments that are drawn to the added limitation are not persuasive because they are drawn to new issue not previously considered.

However, even if the above limitation is entered and given due consideration, Examiner contends that Tojo discloses the inlet being disposed in the electrolyte of the electrolytic bath based on the following disclosure "a prescribed amount of hydrogen fluoride is bubbled in the previously filled KF.HF from the HF feed port 26" (10:44-48) and Tojo further recognizes the corrosive property of HF gas (7:82-65) as well as the need to prevent backflow of the electrolytic bath (3:4-7). Thus, the only difference between current claims and that of Tojo is the connection between the inert gas feed line and the HF feed line downstream of the first automatic valve. However, such deficiency is overcame by the disclosure of Saito. With regard to Applicant's argument concerning Saito does not teach a system having an electrolyte bath: Examiner had addressed the concern regarding analosous arts between Tojo and Saito in the Office Ad-22/10.
